

# WORLD HANDWASHING DAY

October 15<sup>th</sup>

## 5 to 7-year olds

Show your learners the picture of **Germy hand flashcard** and ask them what they think is represented on the hand. Learners should come to the conclusion that they are germs, that they are invisible to the naked eye and that some of them can spread diseases.

Ask learners what the solution is. They should come to the conclusion that they should wash their hands regularly.

Show learners how they should wash their hands going through the **Handwashing poster** (this poster is on 6 pages, which will need to be assembled prior to the lesson).

Let learners practise how to wash their hands using the poster. Give them a tick for each correct move. Learners with the most ticks get to be called the king/queen of the clean.
